

## WALKING THE PROPERTY

Should you make it out to the property then you would try to locate a USGS Survey Stake as show below. Notice the dog tags attached at the base of the Rebar. Each one applies to the associated lot on either side of the stake giving you location info. While not all of the properties will have one, there are several of these remaining from the early days and they help verify that you've found the correct parcel. They can be found as far as 10 or 15 feet or more off either side of the road you're driving. We have found it best to use a GPS Unit to locate the properties. The coordinates for each can be found on the Virtual Tour map property pop-up boxes.
